

## Historic Chester Cathedral gain innovative Friendly WiFi certification

Chester Cathedral carries some great history, part of the history of Chester as an important Roman stronghold. It is a popular attraction for the city with its impressive architecture and gardens. The tower that offers great views of the area is second to none and proving to be an addition in attracting new visitors and a welcome addition to those that know the cathedral well.

The interior of the Cathedral is equally as impressive as the exterior creating a warm and welcoming atmosphere with the mellow appearance due the pinkish colour of the sandstone walls. Chester Cathedral strives to offer more and more to visitors and have developed a fantastic gift shop, café, a series of special events and concerts plus the creation of an onsite falconry centre.

They want Chester Cathedral to keep welcoming new guests and a great way of achieving this is keeping guests connected during their visit and to do this they offer a public WiFi service. This enables guests to keep connected, share their experiences online and show what a great place Chester Cathedral is to visit.

Making sure that their WiFi services are safe for their guests to use was of great importance and Chester Cathedral become the first venue of its kind to receive the Friendly WiFi certification. This means that all of their guests can browse safely, kids and young adults can't be exposed to indecent material whilst online and anyone wishing to abuse the WiFi services for their own's gains won't be able to. We applaud Chester Cathedral as a historic centre for keeping up with technology advances and standards and supporting the Friendly WiFi standard.
